Abstract (Basic): DE 3736397 A

The washing equipment is for the rubber blanket on the cylinder of an offset printing press, being mounted on a swing frame (11) and having a wiping cloth brought to bear against the cylinder. The cloth (14) is unwound from a first shaft (15) on to a second (16) and is guided over supporting members (18,24,25), a moistening unit (19) and an undriven brush roller (13) where it is brought to bear against the cylinder (2). There are two or more supporting members flanking the brush roller, defining a transport plane tangential to it for the cloth. The moistening unit is wedge-shaped, extending into the similarly-shaped space formed between the brush roller and the cloth delivered to it. ADVANTAGE - Simplicity, low cost and economy of washing liquid and cloth.2/3
